

actionable feedback about the strengths of their work and the areas that need improvement. Give them advice about what they can do to take their work to the next level.

Fu Swee Tee

A well-written report explaining on the entire exploratory data analysis process. It's interesting to get to know GloVe algorithm to obtain vector representation for words.

James Kim

Nice job. I found the approach you are taking intriguing. Many methods you are using, I am seeing for the first time. I am curious, how in your unigrams "the" is not the most frequent word, even though in your bigrams and trigrams "of the", "in the" are the most frequent? Did you intentionally remove stop words in unigrams only? I am very curious to see if GloVe works well
